[Additional information such as references and letters of recommendation are available at www.TimothyWoodruff.com]

Tim Woodruff

Symantec Corp. – Springfield, OR

Principal Training & QA Consultant, August 2009 to June 2013

Responsibilities:

- Train agents, admins, and business users on the ServiceNow platform
- Improved customer satisfaction by 200%, agent sat by ~120%, handle times by >33%
- Write scripts & small programs to automate various tasks in call centers and ITSM (C#/JS)
- Create & deliver technical training, videos, & exams using Camtasia and Adobe Captivate
- Teach secure, and defensive programming in JavaScript, C#, & other technologies

Tools & Work Samples

Below are a few notable examples of ServiceNow tools I've written and released publicly for free.

You can find additional samples of my work through my [books](#), and articles on [SN Pro Tips](#).

- **Smarter Update Sets**
Makes Update Sets smarter, and less frustrating! Prevent accidentally closing Update Sets containing checked-out Workflows or cross-scope updates and prevents accidental alterations of "Default" Update Sets, among many other features.
- **Better One-Click Approval**
Approvals with a single-click, without relying on the end-user's mail client. Also fixes some issues with the Outlook mobile client that may prevent users from approving via the out-of-box "mailto" links.
- **Journal Redactor**
Whether you're worried about HIPAA compliance or basic data security and privacy, you may occasionally need to "redact" sensitive information from journal entries in a ticket. Simply deleting the journal record is not enough. This tool entirely wipes the sensitive data from your instance.
- **Time-Zone Utils**
Dealing with time-zones in ServiceNow can be difficult, especially in your server-side code. This tool makes that much easier, even allowing you to convert the time in a GlideDate/Time object from one time-zone to another, on the fly.
- **Temporary Permissions Util**
Whether it's a vendor, a tester, or anyone else needing temporary enhanced permissions, TPU allows you to simply specify the group or role you want to associate with them, and the expiration date for those permissions. TPU will handle the rest.
- **Set Catalog Variables from URL**
This tool allows you to link directly to a Catalog Item in the portal *or* classic UI, and specify some URI parameters in order to pre-populate that request on load. Great for use in Knowledge articles and support tickets!
- **Was This Email Helpful**
Identify which notifications your users find useful, and which they don't. Avoid "notification overload" and "email blindness" by taking actions to make your notifications more relevant, meaningful, and useful to your users.

Certifications & Awards

SERVICENOW CERTIFIED SYSTEM ADMINISTRATOR - 2016

JAVASCRIPT PROGRAMMING – 2013 - 2017
